September 25, 1964

MEMORANDUM FOR THE RECORD

SUBJECT: [          ] PAR 214 and PAR 215 (RT-12 and RT-24 Processors)     25X1

REFERENCE:  a. [                    ] letter of 14 August 1964, relating     25X1
to proposed program changes

b. [                    ] letter of 25 August 1964, relating     25X1
to temperature control

1.  Reference (a) memorandum cites previously agreed upon
changes in PAR-215 (24" Roller Transport Processor).

a.  Delete requirement to process continuous web material,
20" wide.

b.  Delete requirement for cassette feed.

c.  Delete requirement for take-up module to handle
continuous web materials, 20" wide up to 250 ft. long.

2.  The above changes in the program have been agreed upon
by [          ] and the undersigned. [              ] should be advised     25X1
to proceed accordingly.

3.  The reference ("a") communication also refers to delivery
dates for the two items under PAR 214 and PAR 215. The new delivery
schedule cites delivery of the RT-24 Processor in June 1965 and the
RT-12R in July 1965. It was desired to greatly accellerate delivery
of the RT-24 at the expense of the RT-12R delivery. This does not
appear feasible because of [ ] manufacturing procedures. Therefore,     25X1
the [          ] schedule will have to be accepted.     25X1

SUBJECT: [   ]   PAR 214 and PAR 215 (RT-12 and RT-24 Processors)     25X1

4. [        ] also requested that a hypo eliminator stage be     25X1
included in each of the processors. [              ] agreed to include     25X1
this stage at no additional cost. [                ] should be advised     25X1
to proceed.

5. Another point of discussion was whether the temperature
control operations should be accomplished by a closed loop system,
or the mixing of hot and cold water that would in sequence also be
used for film washing. [              ] memorandum (reference b) does     25X1
not recommend a closed loop system because of cost. The writer
agrees. [              ] should be advised to proceed as originally     25X1
planned and should not design for temperature control by the closed
loop system.

6. The revised costs cited in reference (a) appear reasonable.
Acceptance is recommended.

[                                                    ]     25X1
